

The Cavity Protection System™

Hygienic

Helps keep the cavity of a commercial Microwave oven clean and “looked after”. A clean oven is an efficient oven. Environmental Health Officers check ovens for cleanliness.

Avoid Cross Contamination

Help in stopping cross contamination is made by the removable and replaceable Silicon sheets. If a spillage occurs, just replace the inner silicon sheet with a new one, no mopping with a soiled cloth.

Easy to Clean

After each session, just wash with a little washing up liquid and warm water, spray rinse, then dry or leave it to dry.

Helps to Avoid “Down-Time”

Commercial Microwave Ovens that are not clean tend to break-down during the busy periods mostly due to ceiling plates sparking or base plates breaking. The Cavity Protection Liner™ avoids this.

Helps to Avoid Costly Repairs

Food particles left in ceiling plates, base plates and light lens can cause serious damage to the interior of a microwave as they carbonize, cinder and then arc. Having a Cavity Protection Liner™ in the oven will alleviate these problems.

Pays for Itself

The cost of just one repair would pay for a Cavity Protection Liner™ and in the future will save hundreds of pounds in repairs.
